

PRESENTATION

The **Blue Economy and Growth** minor is a multidisciplinary program that focuses on issues relating to the blue economy, including fields such as marine biotechnology, marine renewable energy, sustainable fishing and coastal tourism. It aims to educate students to the environmental, economic and social challenges facing marine and coastal environments.

Targeted skills :

- Apprehending the issues related to the various fields of the blue economy with a multidisciplinary approach
- Developing and applying multidisciplinary skills to the study of marine resources
- Developing an international professional posture by working with industry experts
